Revolution

MIURA

Introducing Miura Pay+

A Solution Tailored To Your Needs

MPI

MPI is a powerful API that is the beating heart of the Pay+ device. MPI powers MPA in transaction processing but also allows partners to integrate their own payment application and have complete control over the EMV payment flow and other device related tasks.

HUB

Hub operates at the centre of the Pay+ device, acting as the "Home/Launcher" screen, controlling the user experience on the device and providing statistical data to the Ascend Platform.

Hub interacts with all other components of the Pay+ suite for the various tasks required during the device's operation.

APP CONNECT

App Connect is responsible for delivering the "Software Profiles", both application and firmware to the Pay+ device. App Connect also provides the user with a way to perform installation and uninstallation of optional applications such as loyalty and EPOS.

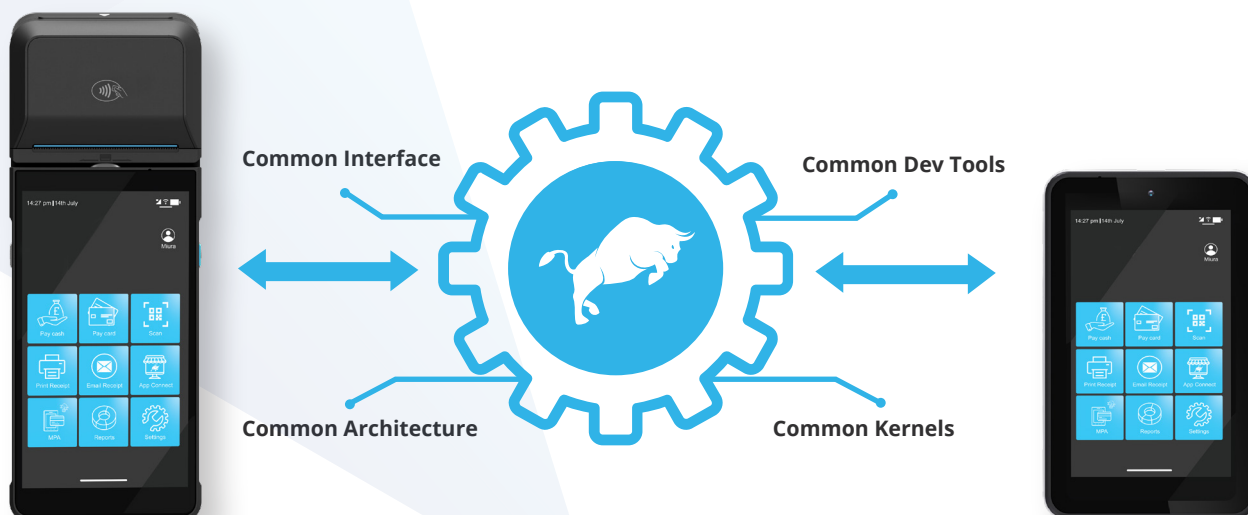

MPA

Where partners do not have their own payment application Miura is pleased to offer the Miura Payment Application (MPA). MPA provides transaction processing including eReceipting and on device reporting as well as user access control protecting sensitive functions such as refunds.

MPI PAYMENT INTERFACE

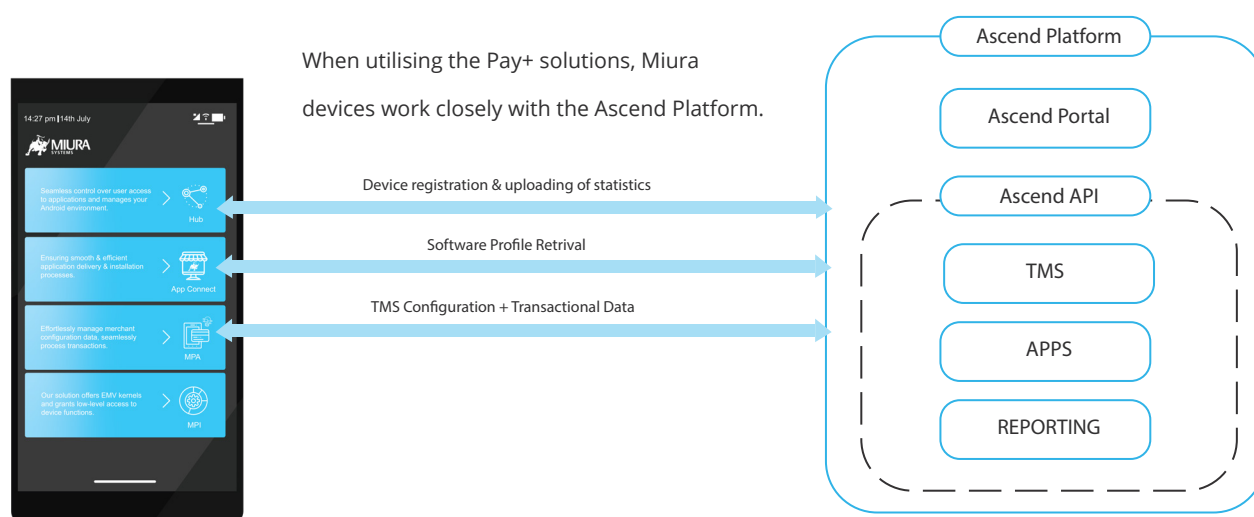

Unchanged Integration on All Devices

Unlock Seamless **Connectivity**

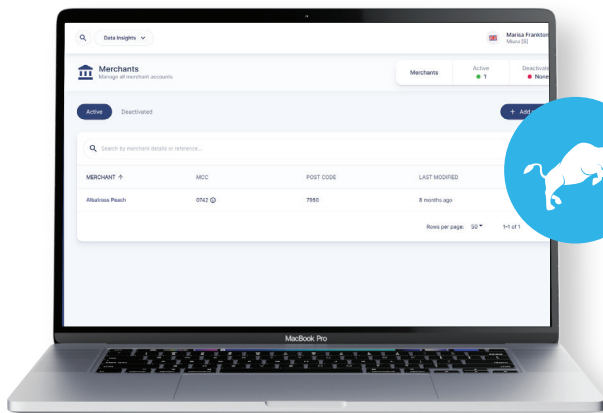

Miura's pre certified, common software application allows a single integration across all devices supported on the Miura platform. One integration covers all devices offered, allowing you to scale and grow without needing multiple integrations. Miura allows you to control your terminal roadmap, without impacting your in-house development and project resources.

Ascend & **Pay+**

Miura Ascend Platform

Accelerate your development & reduce time to market

Estate Manager

Complete management of the merchant data and connected devices, including the allocation to merchant. Device statistics also available to view on Support page to provide insights for the user.

Application Management

Application storage and approval via the Application Catalogue. Distribution to devices of mandatory and optional applications in the field via the use of "Software Profiles".

Key Injection & EMV Configuration

Key injection services provided and EMV configuration creation, allocation and then distribution to devices during fulfilment and updates in the field.

Insights

Detailed transaction reporting available either when using the Miura Payment Application or uploading transactional data from bespoke payment app. Dashboard to highlight critical items.

MODULAR APPROACH

Miura have designed the Ascend Platform in such a way in that partners are able to only take the modules that they require, rather than having to adopt the entire platform.

Several of Miura's partners will have their own payment application and associated infrastructure such as a gateway and as such will not require services such as reporting, key injection and EMV configuration as these are already in place.

GO LIVE

Connect, Scan & Authenticate!

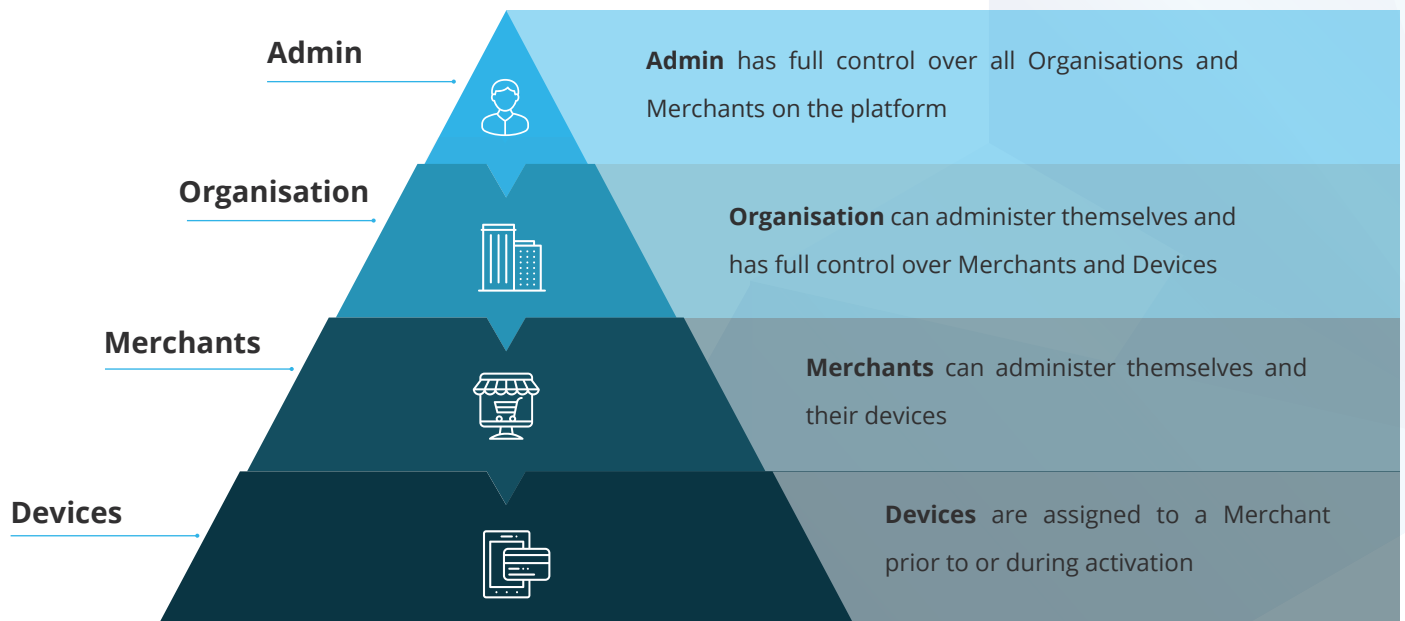

The Ascend Platform supports the allocation of devices across the estate at manufacture stage or at any stage afterwards.

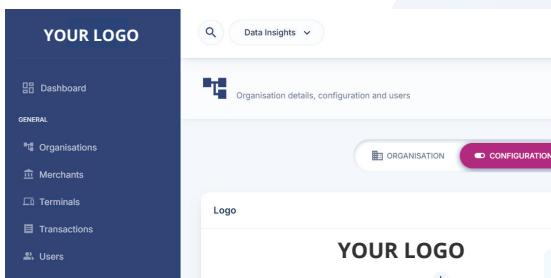

This will enable a frictionless deployment, delivering a secure two-stage set up of the device, through simply scanning a QR code (or entering a six-digit code) which is created for the specific merchant and stored within the Ascend Platform.

This secure and fast activation process will support and accelerate customer rollouts, whilst enhancing the customer boarding and go-live experience.

PLATFORM HIERARCHY

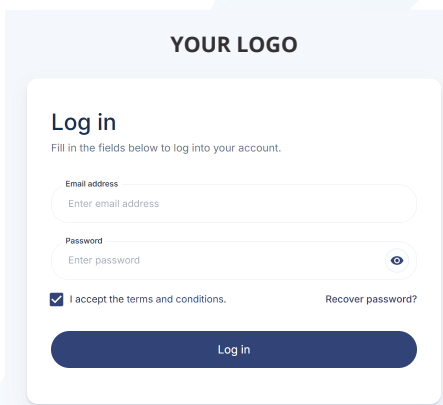

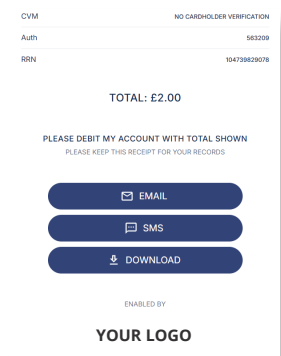

White Label / Branding

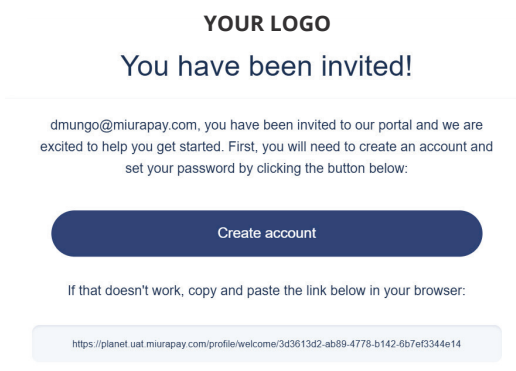

The Ascend portal supports the partner icon being added in place of Miura branding. This icon is used on the menu bar (shown left), as the favicon and on MPA.

All eReceipts are branded using the “Logo” as are the physical receipts printed by MPA.

When the “Logo” is updated, this is displayed on the portal login screen.

All emails sent to users are branded using the “Logo”, including the new portal user message shown right.

BREAK FREE WITH MIURA UNLEASH THE PAYMENT REVOLUTION

Miura is a pioneer in the payment industry, delivering versatile and innovative payment solutions that cater to a wide range of business needs.

Whether you are a small business owner or a large enterprise, the ability to manage payment devices effectively is crucial to operational success.

Miura offers a hardware-agnostic solution, ensuring compatibility and flexibility across various devices and platforms.
